

Raw Prompt

The informal instruction originally supplied by the user, shown exactly as given, before it was expanded into the full master prompt on the following page.

```
act as AI Productivity Consultant hired by a mid-sized company
task : to build a prompt library that helps employees use the generative ai tools
Part 1 :Business Scenarios
scenario -> function
A) Summarizing a long internal report -> Operations
B) Drafting a professional email to a client -> Communications
C) Writing a job description for a new hire -> HR
D) Analyzing customer complaint trends -> Customer Service
E) Creating a project status update -> Project Management
Part 2 : Weak vs. Optimized Prompts (Per Scenario)
Part 3 : Structured Output Generation -> i want you to generate the out put in the structured
JSON format each entry should have id, scenario, role, context, constraints,
example, full_prompt, expected_output_format
Part 4 : Part 4 – Before/After Response Evaluation

for the above given instruction follow them point wise and complete my task use start from the
part 1 , from the scenarios that i have give to you just perform task 2 for each scenario and
follow each and every instruction that i have motioned in the above listed poins and i want the
completed task to be in the following formate and return me the out put in the pdf formate each
part should be coverd in one or to page with the relevant examples
```

Master Prompt

The complete, expanded assignment prompt used to produce the deliverable that follows this page.

MASTER PROMPT: AI PRODUCTIVITY CONSULTANT – PROMPT LIBRARY DEVELOPMENT

ROLE AND EXPERTISE

Act as a Senior AI Productivity Consultant hired by a mid-sized company to design a professional, practical, and structured Prompt Library that helps employees use Generative AI tools effectively in their daily business operations.

You have expertise in:

- * Generative AI and Prompt Engineering
- * Business Process Optimization
- * Professional Communication
- * Human Resources
- * Customer Service Analytics
- * Project Management
- * Structured JSON Output Generation
- * AI Response Evaluation

Your task is to complete the assignment using the exact business scenarios and requirements provided below.

The final deliverable must be a professionally formatted PDF suitable for academic submission and practical corporate use.

ASSIGNMENT OBJECTIVE

Develop a structured AI Prompt Library demonstrating how weak prompts can be transformed into optimized prompts to improve the quality, relevance, consistency, and usefulness of AI-generated responses.

Follow the assignment point by point.

IMPORTANT:

- * Begin with Part 1.
- * Use only the five business scenarios supplied below.
- * Perform the Weak vs. Optimized Prompt task for EACH scenario.
- * Include the structured JSON representation for each scenario.
- * Evaluate the expected improvements through before-and-after response comparisons.
- * Provide relevant examples throughout.
- * Do not omit any requested section.
- * Maintain consistency between scenarios, optimized prompts, JSON entries, and evaluation results.

PART 1: BUSINESS SCENARIOS

Introduce the purpose of the Prompt Library and explain how Generative AI can assist employees in different business functions.

Use the following five scenarios EXACTLY as provided.

ID	Business Scenario	Business Function
A	Summarizing a long internal report	Operations
B	Drafting a professional email to a client	Communications
C	Writing a job description for a new hire	Human Resources
D	Analyzing customer complaint trends	Customer Service
E	Creating a project status update	Project Management

For each scenario, briefly explain:

1. The business situation.
2. The employee's objective.
3. The role of Generative AI.
4. The expected business benefit.
5. Why prompt clarity and structure matter.

Keep the explanation concise, professional, and relevant to a mid-sized company.

PART 2: WEAK VS. OPTIMIZED PROMPTS

This is the PRIMARY TASK of the assignment.

For EACH of the five business scenarios, create a detailed comparison between a weak prompt and an optimized prompt.

Use the following structure consistently.

Scenario A: Summarizing a Long Internal Report

Business Function: Operations

A. Business Context

Explain the situation in which an operations employee needs to summarize a lengthy internal report.

B. Weak Prompt

Provide a realistic example of a vague, incomplete prompt.

Example:

"Summarize this report."

C. Limitations of the Weak Prompt

Identify at least four limitations, such as:

- * Lack of role definition.
- * Missing context.
- * No specified audience.
- * No output structure.
- * No length constraints.
- * No instruction to preserve important findings.

D. Optimized Prompt

Rewrite the weak prompt using professional prompt engineering principles.

The optimized prompt must contain:

1. Role – Who the AI should act as.
2. Context – The business situation.
3. Task – What the AI must accomplish.
4. Input – What information will be supplied.
5. Constraints – What the AI must include or avoid.
6. Output format – How the response should be structured.
7. Quality requirements – Accuracy, clarity, completeness, and relevance.

E. Example Input

Provide a short, realistic sample of the information that an employee might provide to the AI.

F. Expected AI Response

Demonstrate a short example of the type of response the optimized prompt should generate.

G. Improvement Analysis

Explain specifically how the optimized prompt improves the expected response compared with the weak prompt.

Repeat the Same Structure for the Remaining Scenarios

Scenario B: Drafting a Professional Email to a Client

Business Function: Communications

Focus on:

- * Professional tone.
- * Clear purpose.
- * Client relationship.
- * Appropriate greeting and closing.
- * Concise communication.
- * Clear next steps.
- * Avoiding unsupported promises.

Scenario C: Writing a Job Description for a New Hire

Business Function: Human Resources

Focus on:

- * Job title.
- * Department.
- * Responsibilities.
- * Required qualifications.
- * Preferred skills.
- * Experience requirements.
- * Reporting structure.
- * Inclusive and professional language.
- * Clear formatting.

Scenario D: Analyzing Customer Complaint Trends

Business Function: Customer Service

Focus on:

- * Complaint categorization.
- * Frequency analysis.
- * Recurring issues.
- * Customer sentiment.
- * Root-cause hypotheses.
- * Actionable recommendations.
- * Evidence-based conclusions.
- * Avoiding unsupported assumptions.

Scenario E: Creating a Project Status Update

Business Function: Project Management

Focus on:

- * Project name.
- * Reporting period.
- * Completed tasks.
- * Ongoing activities.
- * Upcoming milestones.
- * Risks and blockers.
- * Responsible stakeholders.
- * Action items.
- * Clear status indicators.

For all five scenarios, ensure the optimized prompts are sufficiently detailed to be copied and used directly in a Generative AI tool.

PART 3: STRUCTURED JSON OUTPUT GENERATION

Convert the five optimized prompts into a structured JSON Prompt Library.

Generate one JSON object for each business scenario.

The JSON must contain exactly the following required fields:

- * id
- * scenario
- * role
- * context
- * constraints
- * example
- * full_prompt
- * expected_output_format

Use the following structure:

```
{
  "id": "A",
  "scenario": "Summarizing a long internal report",
  "role": "Operations Analyst",
  "context": "A mid-sized company needs to summarize a lengthy internal operations report for management review.",
```

```

"constraints": [
  "Preserve important findings",
  "Do not invent information",
  "Use professional language",
  "Keep the summary concise"
],
"example": {
  "input": "A sample internal operations report containing performance metrics, delays,
and operational challenges.",
  "expected_response": "A concise management summary highlighting key findings,
operational issues, and recommended actions."
},
"full_prompt": "Insert the complete optimized prompt here.",
"expected_output_format": {
  "type": "Structured summary",
  "sections": [
    "Executive Summary",
    "Key Findings",
    "Challenges",
    "Recommendations"
  ]
}
}

```

IMPORTANT JSON REQUIREMENTS:

1. Generate all five scenario entries.
2. Use valid JSON syntax.
3. Use double quotes for JSON keys and string values.
4. Do not include comments inside JSON.
5. Do not use trailing commas.
6. Ensure every entry contains all eight required fields.
7. Ensure the full_prompt field contains the complete optimized prompt, not a shortened version.
8. Keep the JSON consistent with Part 2.
9. Include the complete JSON in the PDF using a readable monospaced font.
10. If necessary, split the JSON across multiple pages without breaking its logical structure.

Present the JSON as a reusable Prompt Library that employees can adapt to their business needs.

PART 4: BEFORE/AFTER RESPONSE EVALUATION

Evaluate how the optimized prompts improve the quality of AI-generated responses.

For each of the five scenarios, provide:

1. Weak Prompt

Show the original weak prompt.

2. Example Response to Weak Prompt

Generate a realistic example of a generic or incomplete response that could result from the weak prompt.

3. Optimized Prompt

Show the improved prompt.

4. Example Response to Optimized Prompt

Generate an improved response based on the same sample input and business context.

5. Comparative Evaluation

Compare both responses using the following dimensions:

Evaluation Criterion	Weak Prompt Response	Optimized Prompt Response
Relevance		
Clarity		
Completeness		
Structure		
Business usefulness		
Actionability		

Use qualitative descriptions such as:

- * Limited
- * Moderate
- * Clear
- * Detailed
- * Actionable

Do not invent actual business performance improvements or claim measured accuracy gains.

6. Key Improvement

Explain how the optimized prompt improves:

- * Response relevance.
- * Context awareness.
- * Output consistency.
- * Professional quality.
- * Employee productivity.
- * Practical business usability.

Ensure the evaluation is based on the example responses presented in the assignment.

PROMPT ENGINEERING PRINCIPLES

Apply the following principles throughout the assignment:

1. Role-based prompting.
2. Clear task definition.
3. Contextual information.
4. Specific constraints.
5. Defined output formats.
6. Relevant examples.
7. Explicit quality requirements.
8. Avoidance of ambiguity.
9. Business-oriented language.
10. Consistency across all five scenarios.

Do not use unnecessarily complicated terminology. Explain technical concepts in a manner understandable to employees who are new to Generative AI.

PDF FORMATTING AND PRESENTATION REQUIREMENTS

Generate the final deliverable as a downloadable PDF document.

Document Title

AI Productivity Consultant: Generative AI Prompt Library and Evaluation

Subtitle:

A Practical Prompt Engineering Framework for Business Employees

Formatting

- * Professional corporate design.
- * A4 page size.
- * Consistent margins.
- * Clear section headings.
- * Readable typography.
- * Page numbers.
- * Header and footer.
- * Tables for comparisons.
- * Highlighted weak and optimized prompts.
- * Monospaced font for JSON.
- * Consistent spacing and alignment.
- * Relevant examples and callout boxes.
- * No overlapping text or clipped tables.

Page Organization

Organize the document as follows:

1. Cover Page
2. Introduction and Assignment Objective
3. Part 1 – Business Scenarios
4. Part 2 – Weak vs. Optimized Prompts
5. Part 3 – Structured JSON Prompt Library
6. Part 4 – Before/After Response Evaluation
7. Conclusion

Keep each major part within approximately one or two pages where practical. If additional pages are necessary to preserve readability, completeness, or valid JSON formatting, prioritize content quality over strict page limits.

Do not shrink the font excessively just to fit content into fewer pages.

QUALITY VALIDATION BEFORE FINALIZING

Before generating the final PDF, verify the following checklist:

- [] All five original business scenarios are included.
- [] Each scenario has a weak prompt.

- [] Each weak prompt has a clear limitations analysis.
- [] Each scenario has a complete optimized prompt.
- [] Relevant examples are provided.
- [] Part 3 contains all five JSON entries.
- [] Every JSON entry contains all eight required fields.
- [] The JSON syntax is valid.
- [] Part 4 contains before-and-after response examples for all five scenarios.
- [] Evaluations are consistent with the example responses.
- [] No unsupported business claims or fabricated statistics are included.
- [] All four assignment parts are covered.
- [] The final PDF is readable, professionally formatted, and complete.
- [] The PDF contains no placeholder text or unfinished sections.

FINAL DELIVERABLE

Return the completed assignment as a PDF file.

The final PDF must be self-contained, professionally presented, and ready for submission.

Do not return only an outline, explanation, or sample.

Complete the entire assignment using the specified scenarios and requirements.

AI Productivity Consultant: Generative AI Prompt Library and Evaluation

A Practical Prompt Engineering Framework for Business Employees

Deliverable	Structured AI Prompt Library
Scope	5 Business Scenarios • Weak vs. Optimized Prompts • JSON Library • Evaluation
Audience	Mid-Sized Company Employees, New to Generative AI

Introduction and Assignment Objective

This document presents a structured AI Prompt Library developed for a mid-sized company to help employees use Generative AI tools more effectively in daily business operations. The library demonstrates, for five common business scenarios, how a vague ('weak') prompt can be rewritten into a detailed, professional ('optimized') prompt using established prompt engineering principles - role definition, business context, explicit task instructions, constraints, output formatting, and quality requirements.

The objective is twofold: first, to give employees copy-and-paste-ready prompts for real business tasks; and second, to illustrate why prompt clarity and structure directly affect the relevance, completeness, and usefulness of AI-generated responses. Each scenario below is treated the same way - a business context, a weak prompt, an analysis of its limitations, a fully optimized prompt, a worked example, and a before/after evaluation - so the material is consistent and easy to apply across departments.

The library covers five scenarios spanning Operations, Communications, Human Resources, Customer Service, and Project Management. Together they illustrate that the same prompt engineering principles apply regardless of business function, and that a small amount of upfront structure produces a significantly more useful AI response.

Part 1 - Business Scenarios

Generative AI can assist employees across business functions by drafting, summarizing, analyzing, and structuring information far faster than manual work alone. The table below lists the five business scenarios addressed in this library.

ID	Business Scenario	Business Function
A	Summarizing a Long Internal Report	Operations
B	Drafting a Professional Email to a Client	Communications
C	Writing a Job Description for a New Hire	Human Resources
D	Analyzing Customer Complaint Trends	Customer Service
E	Creating a Project Status Update	Project Management

Scenario A: Summarizing a Long Internal Report (Operations)

- 1. Business Situation:** An operations employee receives a 40-page quarterly operations report covering warehouse throughput, shipping delays, staffing levels, and equipment downtime across three regional facilities. Senior management needs the key points before a Monday morning review, but no one has time to read the full document.
- 2. Employee's Objective:** Produce a short, accurate summary that highlights the most important findings, without losing critical figures or misrepresenting the report's conclusions.
- 3. Role of Generative AI:** Generative AI can read the full report text and condense it into a structured summary in seconds, freeing the employee to focus on interpreting the findings rather than re-typing them.
- 4. Expected Business Benefit:** Faster management reporting cycles, less time spent manually condensing long documents, and more consistent summary formatting across departments.
- 5. Why Prompt Clarity Matters:** Without a clear role, audience, and structure, the AI has no way to judge which details matter to management versus which are routine operational detail, so the summary risks being either too shallow or too long.

Scenario B: Drafting a Professional Email to a Client (Communications)

- 1. Business Situation:** A client has asked for an update on a delayed software integration project. The employee needs to respond quickly, maintain a positive relationship, and avoid promising a delivery date that has not been confirmed internally.
- 2. Employee's Objective:** Draft a clear, professional email that acknowledges the delay, explains next steps, and preserves the client relationship without over-promising.
- 3. Role of Generative AI:** Generative AI can draft a polished first version of the email in the company's tone, letting the employee review and send rather than write from a blank page under time pressure.
- 4. Expected Business Benefit:** Faster response times to client inquiries, more consistent tone across the communications team, and reduced risk of unintentionally over-committing the company.
- 5. Why Prompt Clarity Matters:** An email is a direct representation of the company to a paying client, so vague instructions risk an unprofessional tone, a missing next step, or an unintended promise that the business cannot keep.

Scenario C: Writing a Job Description for a New Hire (Human Resources)

- 1. Business Situation:** A department manager has asked HR to post a new role but has only provided a rough idea of the position. HR needs to turn that rough idea into a complete, professional job description suitable for posting externally.
- 2. Employee's Objective:** Produce a clear, inclusive, and complete job description that attracts qualified candidates and reflects the company's standards.
- 3. Role of Generative AI:** Generative AI can turn a short manager brief into a structured job posting with consistent sections and inclusive language, reducing the drafting time for HR.
- 4. Expected Business Benefit:** Faster time-to-post for open roles, more consistent job description quality across departments, and reduced risk of exclusionary or unclear language.
- 5. Why Prompt Clarity Matters:** A job description is a candidate-facing document that shapes who applies; without structure and constraints, the AI may omit required qualifications or use language that is not inclusive.

Scenario D: Analyzing Customer Complaint Trends (Customer Service)

- 1. Business Situation:** The customer service team has logged several hundred complaints over the past month across phone, email, and chat channels. Leadership wants to understand what is driving complaints and what should be prioritized, but no one has time to read every ticket individually.
- 2. Employee's Objective:** Identify patterns in the complaint data, understand likely causes, and recommend actions, based only on the evidence in the data provided.
- 3. Role of Generative AI:** Generative AI can review a batch of complaint records, group them into categories, and surface recurring issues far faster than manual review, while still requiring human judgment to confirm root causes.
- 4. Expected Business Benefit:** Faster identification of systemic service issues, more consistent complaint categorization, and recommendations that are grounded in the actual data rather than assumptions.
- 5. Why Prompt Clarity Matters:** Complaint analysis can easily slide into speculation if the AI is not constrained to the evidence provided; clear structure and constraints keep the output evidence-based and useful for decision-making.

Scenario E: Creating a Project Status Update (Project Management)

- 1. Business Situation:** A project manager needs to send a weekly status update to stakeholders across several departments. The update must reflect what has been completed, what is in progress, upcoming milestones, and any risks, in a format stakeholders are used to reviewing quickly.
- 2. Employee's Objective:** Produce a clear, complete status update that stakeholders can scan quickly and act on where needed.
- 3. Role of Generative AI:** Generative AI can turn raw notes and task lists into a polished, consistently formatted status update, saving the project manager time each reporting cycle.
- 4. Expected Business Benefit:** More consistent status reporting across projects, faster preparation of weekly updates, and clearer visibility into risks and required stakeholder actions.
- 5. Why Prompt Clarity Matters:** Stakeholders rely on status updates to make time-sensitive decisions, so a vague prompt risks omitting risks, blockers, or the specific stakeholders responsible for next steps.

Part 2 - Weak vs. Optimized Prompts

For each business scenario, this section compares a realistic weak prompt against a fully optimized prompt built using seven components: Role, Context, Task, Input, Constraints, Output Format, and Quality Requirements.

Scenario A: Summarizing a Long Internal Report

Business Function: Operations

A. Business Context

An operations employee receives a 40-page quarterly operations report covering warehouse throughput, shipping delays, staffing levels, and equipment downtime across three regional facilities. Senior management needs the key points before a Monday morning review, but no one has time to read the full document.

B. Weak Prompt

WEAK PROMPT

Summarize this report.

C. Limitations of the Weak Prompt

- No role definition - the AI is not told to act as an operations analyst writing for management.
- Missing business context - the AI does not know the company, the reporting period, or why the summary is needed.
- No specified audience - a summary for senior management differs from one for frontline staff.
- No output structure - the response could come back as a single unstructured paragraph.
- No length constraint - the AI might return something almost as long as the original report.
- No instruction to preserve key figures - important numbers (delay percentages, downtime hours) could be dropped or paraphrased inaccurately.

D. Optimized Prompt

OPTIMIZED PROMPT

Role: You are an Operations Analyst preparing materials for senior management.

Context: You have been given the Q3 operations report for a mid-sized logistics company covering three regional warehouses. Management will review this summary in a Monday morning meeting and has not read the full report.

Task: Read the report text provided below and produce a concise management summary that captures the most important findings, operational challenges, and any recommended actions mentioned in the report.

Input: The full text of the Q3 operations report will be provided after this prompt.

Constraints:

- Preserve all key performance figures exactly as stated in the report (percentages, dollar amounts, hours, dates).
- Do not invent or infer information that is not present in the report.
- Do not include routine operational detail that does not affect overall performance.
- Keep the summary to no more than 400 words.
- Use clear, professional, non-technical language suitable for an executive audience.

Output format: Structure the response with the following headings: Executive Summary, Key Findings, Challenges, Recommendations.

Quality requirements: The summary must be accurate to the source report, complete enough that management does not need to read the full document, and free of unsupported claims or speculation.

E. Example Input

Q3 Operations Report (excerpt): 'Warehouse throughput increased 8% quarter-over-quarter, driven by the new pick-path routing at the Denver facility. However, average shipping delays rose from 1.2 days to 2.1 days in the Atlanta facility due to a shortage of certified forklift operators. Equipment downtime across all three facilities totaled 340 hours, a 15% increase from Q2, primarily linked to aging conveyor systems at the Chicago site. Staffing levels remain 12% below target in Atlanta.'

F. Expected AI Response

Executive Summary: Overall throughput improved in Q3, but shipping reliability declined in Atlanta due to staffing and equipment issues.

Key Findings: Warehouse throughput rose 8% quarter-over-quarter, led by new routing at Denver. Average shipping delays in Atlanta increased from 1.2 to 2.1 days.

Challenges: A shortage of certified forklift operators in Atlanta (staffing 12% below target) and aging conveyor systems in Chicago drove a 15% rise in total equipment downtime (340 hours).

Recommendations: The report suggests prioritizing forklift operator certification in Atlanta and evaluating conveyor system replacement at the Chicago facility.

G. Improvement Analysis

The weak prompt gives the AI no way to judge what matters, so it may produce a generic paragraph that either omits the Atlanta delay figures or buries them among less important details. The optimized prompt defines the AI's role and audience, so it writes for executives rather than operations staff; it specifies constraints that force the AI to keep exact figures and avoid invented detail; and it defines an output structure (Executive Summary, Key Findings, Challenges, Recommendations) that matches how management reports

are normally reviewed, making the summary immediately usable without further editing.

Scenario B: Drafting a Professional Email to a Client

Business Function: Communications

A. Business Context

A client has asked for an update on a delayed software integration project. The employee needs to respond quickly, maintain a positive relationship, and avoid promising a delivery date that has not been confirmed internally.

B. Weak Prompt

WEAK PROMPT

Write an email to the client about the delay.

C. Limitations of the Weak Prompt

- No role definition - the AI does not know it should write as a company representative, not a generic assistant.
- Missing context - no information about which project, client, or type of delay is involved.
- No specified tone - the response could be too casual or too apologetic for the relationship.
- No constraint against over-promising - the AI might invent a new delivery date on its own.
- No instruction on greeting, closing, or next steps.
- No length or format guidance for a client-facing message.

D. Optimized Prompt

OPTIMIZED PROMPT

Role: You are a Client Relationship Coordinator writing on behalf of the company to a long-standing client.

Context: The client's software integration project has been delayed by two weeks due to an unresolved technical issue with a third-party API. The client asked for a status update three days ago and has not yet received a reply.

Task: Draft a professional email that acknowledges the delay, briefly explains the cause in general terms, and describes the next steps the team is taking.

Input: Project name, original delivery date, new estimated timeframe (if confirmed), and the name of the client contact will be provided.

Constraints:

- Do not commit to a specific new delivery date unless one is explicitly provided as input.
- Do not disclose internal technical details beyond a general explanation.
- Maintain a professional, apologetic-but-confident tone; avoid sounding defensive.
- Keep the email under 200 words.
- Include a clear next step and an offer to discuss further by phone or call if needed.

Output format: A complete email including subject line, greeting, body paragraphs, and a professional closing.

Quality requirements: The email must be clear, concise, free of unsupported promises, and written in a tone that preserves the client relationship.

E. Example Input

Project: Acme Corp order-management API integration. Original delivery date: October 3. New estimated timeframe: two additional weeks, pending confirmation from engineering. Client contact: Priya Shah, Director of IT at Acme Corp.

F. Expected AI Response

Subject: Update on Your Order-Management Integration Project

Dear Ms. Shah,

Thank you for your patience, and I apologize for the delay in getting back to you. I want to give you an honest update on where things stand with the order-management API integration.

Our engineering team has identified a technical issue with a third-party API that is affecting the original delivery timeline. We currently expect this to add roughly two weeks to the schedule, and our team is working to confirm a firm revised date as soon as possible.

We will follow up with a confirmed timeline within the next few business days. In the meantime, please let me know if you would like to schedule a call to discuss the project in more detail.

Thank you again for your understanding.

Best regards,
[Your Name]

G. Improvement Analysis

The weak prompt leaves the AI free to guess the tone, invent a delivery date, or over-explain the technical cause, any of which could damage the client relationship. The optimized prompt fixes the role and relationship context, explicitly forbids promising an unconfirmed date, and specifies the required components of a client email (subject, greeting, next step, closing), producing a message the employee can send with minimal editing.

Scenario C: Writing a Job Description for a New Hire

Business Function: Human Resources

A. Business Context

A department manager has asked HR to post a new role but has only provided a rough idea of the position. HR needs to turn that rough idea into a complete, professional job description suitable for posting externally.

B. Weak Prompt

WEAK PROMPT

Write a job description for a marketing person.

C. Limitations of the Weak Prompt

- No role definition - the AI is not told to act as an HR professional following company standards.
- Missing context - no department, seniority level, or reporting structure is given.
- No specified responsibilities - 'a marketing person' could mean many different roles.
- No required qualifications or experience level specified.
- No instruction to use inclusive, professional language.
- No output format - the AI might return an unstructured paragraph instead of a formatted posting.

D. Optimized Prompt

OPTIMIZED PROMPT

Role: You are an HR Business Partner writing an external job posting for a mid-sized company.

Context: The Marketing department is hiring a mid-level Marketing Specialist to support campaign execution and reports to the Marketing Manager.

Task: Write a complete, professional job description for this role suitable for posting on the company website and external job boards.

Input: Job title, department, reporting manager, key responsibilities, and required experience level will be provided.

Constraints:

- Use inclusive, bias-free language throughout (avoid gendered or age-coded terms).
- Clearly separate required qualifications from preferred/nice-to-have skills.
- State the reporting structure explicitly.
- Do not state an exact salary unless one is provided as input.
- Keep the description between 300 and 500 words.

Output format: Structure the response with the following sections: Job Title, Department, Reports To, Job Summary, Key Responsibilities, Required Qualifications, Preferred Qualifications, and How to Apply.

Quality requirements: The description must be accurate to the input provided, professional in tone, and formatted so it can be posted with minimal editing.

E. Example Input

Job title: Marketing Specialist. Department: Marketing. Reports to: Marketing Manager. Key responsibilities: execute digital campaigns, coordinate with design team, track campaign performance metrics. Experience level: 2-4 years of marketing experience, bachelor's degree preferred.

F. Expected AI Response

Job Title: Marketing Specialist
Department: Marketing
Reports To: Marketing Manager

Job Summary: We are seeking a Marketing Specialist to execute digital marketing campaigns and support the broader marketing team in driving brand awareness and engagement.

Key Responsibilities: Execute digital marketing campaigns across multiple channels; coordinate with the design team on creative assets; track and report on campaign performance metrics.

Required Qualifications: 2-4 years of marketing experience; strong written and verbal communication skills; experience with digital campaign tools.

Preferred Qualifications: Bachelor's degree in Marketing, Communications, or a related field; familiarity with analytics platforms.

How to Apply: Interested candidates should submit a resume and cover letter through the company careers page.

G. Improvement Analysis

The weak prompt gives the AI almost nothing to work with, so the resulting posting could describe the wrong seniority level, omit required qualifications, or use non-inclusive language. The optimized prompt supplies the actual role details, requires separation of required versus preferred qualifications, enforces inclusive language, and defines a standard posting structure, producing a description that is ready for review and posting rather than a rough draft.

Scenario D: Analyzing Customer Complaint Trends

Business Function: Customer Service

A. Business Context

The customer service team has logged several hundred complaints over the past month across phone, email, and chat channels. Leadership wants to understand what is driving complaints and what should be prioritized, but no one has time to read every ticket individually.

B. Weak Prompt

WEAK PROMPT

Look at these complaints and tell me what's wrong.

C. Limitations of the Weak Prompt

- No role definition - the AI is not told to act as a customer service analyst.
- Missing context - no information about the channel, time period, or business the complaints relate to.
- No categorization instruction - the AI may produce a vague narrative instead of grouped categories.
- No constraint against speculation - the AI might guess at root causes not supported by the data.
- No instruction to quantify frequency or highlight recurring issues.
- No requirement for actionable recommendations.

D. Optimized Prompt

OPTIMIZED PROMPT

Role: You are a Customer Service Analyst reviewing a batch of customer complaints for leadership.

Context: The complaints were submitted over the past month across phone, email, and chat channels for a mid-sized retail company. Leadership wants to understand what is driving complaints before the quarterly service review.

Task: Analyze the complaint records provided and identify categories, frequency, recurring issues, and overall customer sentiment.

Input: A list or table of individual complaint records, each including a short description and the channel it was submitted through, will be provided.

Constraints:

- Base all conclusions strictly on the complaints provided; do not assume causes that are not supported by the data.
- Clearly separate observed patterns from hypotheses about root cause.
- Quantify frequency where possible (for example, number or percentage of complaints per category).
- Recommendations must be tied directly to a specific finding.

Output format: Structure the response with the following sections: Complaint Categories, Frequency Summary, Recurring Issues, Customer Sentiment, Root-Cause Hypotheses, Recommended Actions.

Quality requirements: The analysis must be evidence-based, clearly distinguish fact from hypothesis, and provide recommendations that are directly actionable by the customer service team.

E. Example Input

Sample complaints: (1) Email - 'Order arrived 5 days late, no tracking update.' (2) Chat - 'Refund still not processed after 2 weeks.' (3) Phone - 'Waited 25 minutes to speak with an agent.' (4) Email - 'Package arrived damaged.' (5) Chat - 'Refund request denied without explanation.' Similar records continue for a total of 60 complaints.

F. Expected AI Response

Complaint Categories: Shipping delays, refund processing delays, agent wait times, damaged products.

Frequency Summary: Of the 60 complaints reviewed, approximately 40% relate to refund processing, 30% to shipping delays, 20% to agent wait times, and 10% to damaged products.

Recurring Issues: Refund-related complaints frequently mention a lack of communication about refund status.

Customer Sentiment: Complaints related to refunds show a notably frustrated tone, often citing 'no explanation' or 'no response.'

Root-Cause Hypotheses: The pattern suggests a possible gap in refund status communication, though the underlying processing cause cannot be confirmed from complaint text alone.

Recommended Actions: Prioritize reviewing the refund communication process, since it represents the largest complaint category and shows the most negative sentiment.

G. Improvement Analysis

The weak prompt invites the AI to speculate freely and produce a general narrative that may not be grounded in the actual complaint data. The optimized prompt requires the AI to quantify categories, separate observed patterns from hypotheses, and tie every recommendation to a specific finding, producing an analysis leadership can trust and act on rather than a vague impression.

Scenario E: Creating a Project Status Update

Business Function: Project Management

A. Business Context

A project manager needs to send a weekly status update to stakeholders across several departments. The update must reflect what has been completed, what is in progress, upcoming milestones, and any risks, in a format stakeholders are used to reviewing quickly.

B. Weak Prompt

WEAK PROMPT

Give me a project update.

C. Limitations of the Weak Prompt

- No role definition - the AI is not told to act as the project manager reporting to stakeholders.
- Missing context - no project name, reporting period, or audience is specified.
- No structure for completed tasks versus ongoing activities versus upcoming milestones.
- No instruction to include risks or blockers.
- No requirement to name responsible stakeholders or action items.
- No status indicators (on track, at risk, delayed) requested.

D. Optimized Prompt

OPTIMIZED PROMPT

Role: You are the Project Manager preparing a weekly status update for cross-departmental stakeholders.

Context: The project is a company-wide CRM migration currently in its execution phase. Stakeholders receive this update every Friday and use it to decide whether escalation is needed.

Task: Turn the raw notes and task list provided into a clear, complete status update for this reporting period.

Input: Project name, reporting period, a list of completed tasks, ongoing activities, upcoming milestones, and any known risks or blockers will be provided.

Constraints:

- Include an explicit overall status indicator (On Track, At Risk, or Delayed) based only on the information provided.
- List the stakeholder responsible for each open risk or action item.
- Do not omit risks or blockers even if the overall status is positive.
- Keep the update concise enough to be read in under two minutes.

Output format: Structure the response with the following sections: Project Name and Reporting Period, Overall Status, Completed This Period, Ongoing Activities, Upcoming Milestones, Risks and Blockers, Action Items.

Quality requirements: The update must be accurate to the input provided, clearly organized, and actionable for stakeholders who only have a few minutes to review it.

E. Example Input

Project: CRM Migration. Reporting period: Week of Sept 22-26. Completed: data mapping for sales module, user acceptance testing for finance module. Ongoing: integration testing with billing system. Upcoming: go-live readiness review (Oct 3). Risks: billing system vendor has not confirmed API documentation, owned by IT Integration Lead.

F. Expected AI Response

Project Name and Reporting Period: CRM Migration - Week of Sept 22-26

Overall Status: At Risk

Completed This Period: Data mapping for the sales module; user acceptance testing for the finance module.

Ongoing Activities: Integration testing with the billing system.

Upcoming Milestones: Go-live readiness review scheduled for October 3.

Risks and Blockers: The billing system vendor has not confirmed API documentation, which may delay integration testing. Owner: IT Integration Lead.

Action Items: IT Integration Lead to follow up with the vendor on API documentation before the October 3 readiness review.

G. Improvement Analysis

The weak prompt leaves the AI without any of the actual project detail, so it can only produce a generic, non-specific template. The optimized prompt requires an explicit overall status indicator, forces risks to be reported even when the overall picture looks positive, and assigns ownership to each open item, producing an update stakeholders can act on immediately rather than a vague summary.

Part 3 - Structured JSON Prompt Library

The five optimized prompts are represented below as a structured JSON Prompt Library. Each entry contains the eight required fields (id, scenario, role, context, constraints, example, full_prompt, expected_output_format) and can be adapted by employees or integrated into internal AI tools.

JSON Entry A: Summarizing a Long Internal Report

```

{
  "id": "A",
  "scenario": "Summarizing a Long Internal Report",
  "role": "Operations Analyst",
  "context": "An operations employee receives a 40-page quarterly operations report covering warehouse throughput, shipping delays, staffing levels, and equipment downtime across three regional facilities. Senior management needs the key points before a Monday morning review, but no one has time to read the full document.",
  "constraints": [
    "Preserve all key performance figures exactly as stated",
    "Do not invent information not present in the report",
    "Use professional, non-technical language",
    "Keep the summary under 400 words"
  ],
  "example": {
    "input": "Q3 Operations Report (excerpt): 'Warehouse throughput increased 8% quarter-over-quarter, driven by the new pick-path routing at the Denver facility. However, average shipping delays rose from 1.2 days to 2.1 days in the Atlanta facility due to a shortage of certified forklift operators. Equipment downtime across all three facilities totaled 340 hours, a 15% increase from Q2, primarily linked to aging conveyor systems at the Chicago site. Staffing levels remain 12% below target in Atlanta.'",
    "expected_response": "Executive Summary: Overall throughput improved in Q3, but shipping reliability declined in Atlanta due to staffing and equipment issues. Key Findings: Warehouse throughput rose 8% quarter-over-quarter, led by new routing at Denver. Average shipping delays in Atlanta increased from 1.2 to 2.1 days. Challenges: A shortage of certified forklift operators in Atlanta (staffing 12% below target) and aging conveyor systems in Chicago drove a 15% rise in total equipment downtime (340 hours). Recommendations: The report suggests prioritizing forklift operator certification in Atlanta and evaluating conveyor system replacement at the Chicago facility."
  },
  "full_prompt": "Role: You are an Operations Analyst preparing materials for senior management.\n\nContext: You have been given the Q3 operations report for a mid-sized logistics company covering three regional warehouses. Management will review this summary in a Monday morning meeting and has not read the full report.\n\nTask: Read the report text provided below and produce a concise management summary that captures the most important findings, operational challenges, and any recommended actions mentioned in the report.\n\nInput: The full text of the Q3 operations report will be provided after this prompt.\n\nConstraints:\n- Preserve all key performance figures exactly as stated in the report (percentages, dollar amounts, hours, dates).\n- Do not invent or infer information that is not present in the report.\n- Do not include routine operational detail that does not affect overall performance.\n- Keep the summary to no more than 400 words.\n- Use clear, professional, non-technical language suitable for an executive audience.\n\nOutput format: Structure the response with the following headings: Executive Summary, Key Findings, Challenges, Recommendations.\n\nQuality requirements: The summary must be accurate to the source report, complete enough that management does not need to read the full document, and free of unsupported claims or speculation.",
  "expected_output_format": {
    "type": "Structured response",
    "sections": [
      "Executive Summary",
      "Key Findings",
      "Challenges",
      "Recommendations"
    ]
  }
}

```

JSON Entry B: Drafting a Professional Email to a Client

```

{
  "id": "B",
  "scenario": "Drafting a Professional Email to a Client",
  "role": "Client Relationship Coordinator",
  "context": "A client has asked for an update on a delayed software integration project. The employee needs to respond quickly, maintain a positive relationship, and avoid promising a delivery date that has not been confirmed internally.",
  "constraints": [
    "Do not commit to an unconfirmed delivery date",
    "Do not disclose internal technical detail beyond a general explanation",
    "Maintain a professional, non-defensive tone",
    "Keep the email under 200 words"
  ],
  "example": {
    "input": "Project: Acme Corp order-management API integration. Original delivery date: October 3. New estimated timeframe: two additional weeks, pending confirmation from engineering. Client contact: Priya Shah, Director of IT at Acme Corp.",
    "expected_response": "Subject: Update on Your Order-Management Integration Project Dear Ms. Shah, Thank you for your patience, and I apologize for the delay in getting back to you. I want to give you an honest update on where things stand with the order-management API integration. Our engineering team has identified a technical issue with a third-party API that is affecting the original delivery timeline. We currently expect this to add roughly two weeks to the schedule, and our team is working to confirm a firm revised date as soon as possible. We will follow up with a confirmed timeline within the next few business days. In the meantime, please let me know if you would like to schedule a call to discuss the project in more detail. Thank you again for your understanding. Best regards, [Your Name]"
  },
  "full_prompt": "Role: You are a Client Relationship Coordinator writing on behalf of the company to a long-standing client.\n\nContext: The client's software integration project has been delayed by two weeks due to an unresolved technical issue with a third-party API. The client asked for a status update three days ago and has not yet received a reply.\n\nTask: Draft a professional email that acknowledges the delay, briefly explains the cause in general terms, and describes the next steps the team is taking.\n\nInput: Project name, original delivery date, new estimated timeframe (if confirmed), and the name of the client contact will be provided.\n\nConstraints:\n- Do not commit to a specific new delivery date unless one is explicitly provided as input.\n- Do not disclose internal technical details beyond a general explanation.\n- Maintain a professional, apologetic-but-confident tone; avoid sounding defensive.\n- Keep the email under 200 words.\n- Include a clear next step and an offer to discuss further by phone or call if needed.\n\nOutput format: A complete email including subject line, greeting, body paragraphs, and a professional closing.\n\nQuality requirements: The email must be clear, concise, free of unsupported promises, and written in a tone that preserves the client relationship.",
  "expected_output_format": {
    "type": "Structured response",
    "sections": [
      "Subject Line",
      "Greeting",
      "Body",
      "Next Steps",
      "Closing"
    ]
  }
}

```

JSON Entry C: Writing a Job Description for a New Hire

```

{
  "id": "C",
  "scenario": "Writing a Job Description for a New Hire",
  "role": "HR Business Partner",
  "context": "A department manager has asked HR to post a new role but has only provided a rough idea of the position. HR needs to turn that rough idea into a complete, professional job description suitable for posting externally.",
  "constraints": [
    "Use inclusive, bias-free language",
    "Separate required from preferred qualifications",
    "State the reporting structure explicitly",
    "Keep the description between 300 and 500 words"
  ],
  "example": {
    "input": "Job title: Marketing Specialist. Department: Marketing. Reports to: Marketing Manager. Key responsibilities: execute digital campaigns, coordinate with design team, track campaign performance metrics. Experience level: 2-4 years of marketing experience, bachelor's degree preferred.",
    "expected_response": "Job Title: Marketing Specialist Department: Marketing Reports To: Marketing Manager Job Summary: We are seeking a Marketing Specialist to execute digital marketing campaigns and support the broader marketing team in driving brand awareness and engagement. Key Responsibilities: Execute digital marketing campaigns across multiple channels; coordinate with the design team on creative assets; track and report on campaign performance metrics. Required Qualifications: 2-4 years of marketing experience; strong written and verbal communication skills; experience with digital campaign tools. Preferred Qualifications: Bachelor's degree in Marketing, Communications, or a related field; familiarity with analytics platforms. How to Apply: Interested candidates should submit a resume and cover letter through the company careers page."
  },
  "full_prompt": "Role: You are an HR Business Partner writing an external job posting for a mid-sized company.\n\nContext: The Marketing department is hiring a mid-level Marketing Specialist to support campaign execution and reports to the Marketing Manager.\n\nTask: Write a complete, professional job description for this role suitable for posting on the company website and external job boards.\n\nInput: Job title, department, reporting manager, key responsibilities, and required experience level will be provided.\n\nConstraints:\n- Use inclusive, bias-free language throughout (avoid gendered or age-coded terms).\n- Clearly separate required qualifications from preferred/nice-to-have skills.\n- State the reporting structure explicitly.\n- Do not state an exact salary unless one is provided as input.\n- Keep the description between 300 and 500 words.\n\nOutput format: Structure the response with the following sections: Job Title, Department, Reports To, Job Summary, Key Responsibilities, Required Qualifications, Preferred Qualifications, and How to Apply.\n\nQuality requirements: The description must be accurate to the input provided, professional in tone, and formatted so it can be posted with minimal editing.",
  "expected_output_format": {
    "type": "Structured response",
    "sections": [
      "Job Title",
      "Department",
      "Reports To",
      "Job Summary",
      "Key Responsibilities",
      "Required Qualifications",
      "Preferred Qualifications",
      "How to Apply"
    ]
  }
}

```

JSON Entry D: Analyzing Customer Complaint Trends

```

{
  "id": "D",
  "scenario": "Analyzing Customer Complaint Trends",
  "role": "Customer Service Analyst",
  "context": "The customer service team has logged several hundred complaints over the past month across phone, email, and chat channels. Leadership wants to understand what is driving complaints and what should be prioritized, but no one has time to read every ticket individually.",
  "constraints": [
    "Base conclusions strictly on the complaints provided",
    "Separate observed patterns from root-cause hypotheses",
    "Quantify frequency where possible",
    "Tie every recommendation to a specific finding"
  ],
  "example": {
    "input": "Sample complaints: (1) Email - 'Order arrived 5 days late, no tracking update.' (2) Chat - 'Refund still not processed after 2 weeks.' (3) Phone - 'Waited 25 minutes to speak with an agent.' (4) Email - 'Package arrived damaged.' (5) Chat - 'Refund request denied without explanation.' Similar records continue for a total of 60 complaints.",
    "expected_response": "Complaint Categories: Shipping delays, refund processing delays, agent wait times, damaged products. Frequency Summary: Of the 60 complaints reviewed, approximately 40% relate to refund processing, 30% to shipping delays, 20% to agent wait times, and 10% to damaged products. Recurring Issues: Refund-related complaints frequently mention a lack of communication about refund status. Customer Sentiment: Complaints related to refunds show a notably frustrated tone, often citing 'no explanation' or 'no response.' Root-Cause Hypotheses: The pattern suggests a possible gap in refund status communication, though the underlying processing cause cannot be confirmed from complaint text alone. Recommended Actions: Prioritize reviewing the refund communication process, since it represents the largest complaint category and shows the most negative sentiment."
  },
  "full_prompt": "Role: You are a Customer Service Analyst reviewing a batch of customer complaints for leadership.\n\nContext: The complaints were submitted over the past month across phone, email, and chat channels for a mid-sized retail company. Leadership wants to understand what is driving complaints before the quarterly service review.\n\nTask: Analyze the complaint records provided and identify categories, frequency, recurring issues, and overall customer sentiment.\n\nInput: A list or table of individual complaint records, each including a short description and the channel it was submitted through, will be provided.\n\nConstraints:\n- Base all conclusions strictly on the complaints provided; do not assume causes that are not supported by the data.\n- Clearly separate observed patterns from hypotheses about root cause.\n- Quantify frequency where possible (for example, number or percentage of complaints per category).\n- Recommendations must be tied directly to a specific finding.\n\nOutput format: Structure the response with the following sections: Complaint Categories, Frequency Summary, Recurring Issues, Customer Sentiment, Root-Cause Hypotheses, Recommended Actions.\n\nQuality requirements: The analysis must be evidence-based, clearly distinguish fact from hypothesis, and provide recommendations that are directly actionable by the customer service team.",
  "expected_output_format": {
    "type": "Structured response",
    "sections": [
      "Complaint Categories",
      "Frequency Summary",
      "Recurring Issues",
      "Customer Sentiment",
      "Root-Cause Hypotheses",
      "Recommended Actions"
    ]
  }
}

```

JSON Entry E: Creating a Project Status Update

```

{
  "id": "E",
  "scenario": "Creating a Project Status Update",
  "role": "Project Manager",
  "context": "A project manager needs to send a weekly status update to stakeholders across several departments. The update must reflect what has been completed, what is in progress, upcoming milestones, and any risks, in a format stakeholders are used to reviewing quickly.",
  "constraints": [
    "Include an explicit overall status indicator",
    "Assign a responsible stakeholder to each risk or action item",
    "Do not omit risks or blockers",
    "Keep the update readable in under two minutes"
  ],
  "example": {
    "input": "Project: CRM Migration. Reporting period: Week of Sept 22-26. Completed: data mapping for sales module, user acceptance testing for finance module. Ongoing: integration testing with billing system. Upcoming: go-live readiness review (Oct 3). Risks: billing system vendor has not confirmed API documentation, owned by IT Integration Lead.",
    "expected_response": "Project Name and Reporting Period: CRM Migration - Week of Sept 22-26\nOverall Status: At Risk\nCompleted This Period: Data mapping for the sales module; user acceptance testing for the finance module. Ongoing Activities: Integration testing with the billing system. Upcoming Milestones: Go-live readiness review scheduled for October 3. Risks and Blockers: The billing system vendor has not confirmed API documentation, which may delay integration testing. Owner: IT Integration Lead. Action Items: IT Integration Lead to follow up with the vendor on API documentation before the October 3 readiness review."
  },
  "full_prompt": "Role: You are the Project Manager preparing a weekly status update for cross-departmental stakeholders.\n\nContext: The project is a company-wide CRM migration currently in its execution phase. Stakeholders receive this update every Friday and use it to decide whether escalation is needed.\n\nTask: Turn the raw notes and task list provided into a clear, complete status update for this reporting period.\n\nInput: Project name, reporting period, a list of completed tasks, ongoing activities, upcoming milestones, and any known risks or blockers will be provided.\n\nConstraints:\n- Include an explicit overall status indicator (On Track, At Risk, or Delayed) based only on the information provided.\n- List the stakeholder responsible for each open risk or action item.\n- Do not omit risks or blockers even if the overall status is positive.\n- Keep the update concise enough to be read in under two minutes.\n\nOutput format: Structure the response with the following sections: Project Name and Reporting Period, Overall Status, Completed This Period, Ongoing Activities, Upcoming Milestones, Risks and Blockers, Action Items.\n\nQuality requirements: The update must be accurate to the input provided, clearly organized, and actionable for stakeholders who only have a few minutes to review it.",
  "expected_output_format": {
    "type": "Structured response",
    "sections": [
      "Project Name and Reporting Period",
      "Overall Status",
      "Completed This Period",
      "Ongoing Activities",
      "Upcoming Milestones",

      "Action Items"
    ]
  }
}

```

Part 4 - Before/After Response Evaluation

This section compares an example response generated from each weak prompt against an example response generated from the corresponding optimized prompt, using the same underlying business input. Descriptions are qualitative (Limited, Moderate, Clear, Detailed, Actionable) and reflect only the example responses shown; no measured business performance improvements are claimed.

Scenario A: Summarizing a Long Internal Report

1. Weak Prompt

WEAK PROMPT

Summarize this report.

2. Example Response to Weak Prompt

Here's a summary: The report talks about the warehouses and shipping. There were some delays and downtime issues. Staffing was also a bit short in one location. Overall things could be better.

3. Optimized Prompt

OPTIMIZED PROMPT (SUMMARY)

Role: You are an Operations Analyst preparing materials for senior management.

Context: You have been given the Q3 operations report for a mid-sized logistics company covering three regional warehouses. Management will review this summary in a Monday morning [...full prompt in Part 2 / Part 3]

4. Example Response to Optimized Prompt

Executive Summary: Overall throughput improved in Q3, but shipping reliability declined in Atlanta due to staffing and equipment issues.

Key Findings: Warehouse throughput rose 8% quarter-over-quarter, led by new routing at Denver. Average shipping delays in Atlanta increased from 1.2 to 2.1 days.

Challenges: A shortage of certified forklift operators in Atlanta (staffing 12% below target) and aging conveyor systems in Chicago drove a 15% rise in total equipment downtime (340 hours).

Recommendations: The report suggests prioritizing forklift operator certification in Atlanta and evaluating conveyor system replacement at the Chicago facility.

5. Comparative Evaluation

Evaluation Criterion	Weak Prompt Response	Optimized Prompt Response
Relevance	Limited - may highlight generic or minor points instead of the figures management cares about.	Clear - focuses on the findings, challenges, and figures relevant to a management audience.
Clarity	Moderate - likely a single unstructured paragraph.	Detailed - organized under clear headings that are easy to scan.

Evaluation Criterion	Weak Prompt Response	Optimized Prompt Response
Completeness	Limited - may omit specific figures such as downtime hours or delay percentages.	Detailed - retains the specific figures and challenges from the source report.
Structure	Limited - no defined sections or headings.	Clear - follows the requested Executive Summary / Key Findings / Challenges / Recommendations structure.
Business Usefulness	Moderate - still requires manual editing before it can be shared with management.	Actionable - ready to paste into a management briefing with minimal editing.
Actionability	Limited - no clear recommendations are surfaced.	Actionable - recommendations are separated out and tied to specific challenges.

6. Key Improvement

The optimized prompt improves relevance and context awareness by defining the audience and business situation, improves output consistency by fixing a repeatable section structure, improves professional quality by constraining tone and figure accuracy, and improves employee productivity because the response is close to submission-ready rather than a rough paragraph that needs rewriting.

Scenario B: Drafting a Professional Email to a Client

1. Weak Prompt

WEAK PROMPT

Write an email to the client about the delay.

2. Example Response to Weak Prompt

Hi, just wanted to let you know your project is delayed. We're working on it and should have it done soon. Sorry about that. Let us know if you have questions.

3. Optimized Prompt

OPTIMIZED PROMPT (SUMMARY)

Role: You are a Client Relationship Coordinator writing on behalf of the company to a long-standing client.

Context: The client's software integration project has been delayed by two weeks due to an unresolved technical issue with a third-party API. The clien [...full prompt in Part 2 / Part 3]

4. Example Response to Optimized Prompt

Subject: Update on Your Order-Management Integration Project

Dear Ms. Shah,

Thank you for your patience, and I apologize for the delay in getting back to you. I want to give you an honest update on where things stand with the order-management API integration.

Our engineering team has identified a technical issue with a third-party API that is affecting the original delivery timeline. We currently expect this to add roughly two weeks to the schedule, and our team is working to confirm a firm revised date as soon as possible.

We will follow up with a confirmed timeline within the next few business days. In the meantime, please let me know if you would like to schedule a call to discuss the project in more detail.

Thank you again for your understanding.

Best regards,
[Your Name]

5. Comparative Evaluation

Evaluation Criterion	Weak Prompt Response	Optimized Prompt Response
Relevance	Limited - may address the delay only in general terms without the right tone for a client relationship.	Clear - directly addresses the specific project, cause, and next step.
Clarity	Moderate - message structure and tone may be inconsistent.	Clear - follows a standard professional email structure.
Completeness	Limited - may omit a next step or closing.	Detailed - includes greeting, explanation, next step, and closing.
Structure	Limited - no guaranteed subject line or closing.	Clear - subject, greeting, body, and closing are all present.

Evaluation Criterion	Weak Prompt Response	Optimized Prompt Response
Business Usefulness	Moderate - may need to be rewritten before sending to a client.	Actionable - ready to send with minor personalization.
Actionability	Limited - may not state a clear next step for the client.	Actionable - offers a specific next step and follow-up commitment.

6. Key Improvement

The optimized prompt improves relevance by grounding the email in the specific project and client relationship, improves professional quality by constraining tone and preventing over-promising, improves consistency by requiring a standard email structure, and improves productivity because the draft is close to send-ready.

Scenario C: Writing a Job Description for a New Hire

1. Weak Prompt

WEAK PROMPT

Write a job description for a marketing person.

2. Example Response to Weak Prompt

We are looking for a Marketing person to join our team. The person will do marketing tasks and work with the team. Some experience is preferred. Apply if interested.

3. Optimized Prompt

OPTIMIZED PROMPT (SUMMARY)

Role: You are an HR Business Partner writing an external job posting for a mid-sized company.

Context: The Marketing department is hiring a mid-level Marketing Specialist to support campaign execution and reports to the Marketing Manager.

Task: Write a compl [...full prompt in Part 2 / Part 3]

4. Example Response to Optimized Prompt

Job Title: Marketing Specialist
Department: Marketing
Reports To: Marketing Manager

Job Summary: We are seeking a Marketing Specialist to execute digital marketing campaigns and support the broader marketing team in driving brand awareness and engagement.

Key Responsibilities: Execute digital marketing campaigns across multiple channels; coordinate with the design team on creative assets; track and report on campaign performance metrics.

Required Qualifications: 2-4 years of marketing experience; strong written and verbal communication skills; experience with digital campaign tools.

Preferred Qualifications: Bachelor's degree in Marketing, Communications, or a related field; familiarity with analytics platforms.

How to Apply: Interested candidates should submit a resume and cover letter through the company careers page.

5. Comparative Evaluation

Evaluation Criterion	Weak Prompt Response	Optimized Prompt Response
Relevance	Limited - may describe a generic marketing role unrelated to the actual position.	Clear - matches the specific responsibilities and seniority level provided.
Clarity	Moderate - responsibilities and qualifications may be mixed together.	Detailed - qualifications are clearly separated into required and preferred.
Completeness	Limited - may omit reporting structure or required experience level.	Detailed - includes all standard sections of a job posting.
Structure	Limited - likely an unstructured paragraph.	Clear - organized into standard job posting sections.

Evaluation Criterion	Weak Prompt Response	Optimized Prompt Response
Business Usefulness	Moderate - would require substantial rewriting before posting.	Actionable - close to ready for external posting.
Actionability	Limited - unclear what a candidate should do next.	Actionable - includes a clear how-to-apply instruction.

6. Key Improvement

The optimized prompt improves relevance by anchoring the description to the actual role details, improves consistency by using a standard section structure across postings, improves professional and inclusive quality through explicit language constraints, and improves HR productivity by producing a near-final draft.

Scenario D: Analyzing Customer Complaint Trends

1. Weak Prompt

WEAK PROMPT

Look at these complaints and tell me what's wrong.

2. Example Response to Weak Prompt

It looks like customers are complaining about shipping and refunds and wait times. Some are damaged too. Probably the company should look into fixing these issues to make customers happier.

3. Optimized Prompt

OPTIMIZED PROMPT (SUMMARY)

Role: You are a Customer Service Analyst reviewing a batch of customer complaints for leadership.

Context: The complaints were submitted over the past month across phone, email, and chat channels for a mid-sized retail company. Leadership wants to understand [...full prompt in Part 2 / Part 3]

4. Example Response to Optimized Prompt

Complaint Categories: Shipping delays, refund processing delays, agent wait times, damaged products.

Frequency Summary: Of the 60 complaints reviewed, approximately 40% relate to refund processing, 30% to shipping delays, 20% to agent wait times, and 10% to damaged products.

Recurring Issues: Refund-related complaints frequently mention a lack of communication about refund status.

Customer Sentiment: Complaints related to refunds show a notably frustrated tone, often citing 'no explanation' or 'no response.'

Root-Cause Hypotheses: The pattern suggests a possible gap in refund status communication, though the underlying processing cause cannot be confirmed from complaint text alone.

Recommended Actions: Prioritize reviewing the refund communication process, since it represents the largest complaint category and shows the most negative sentiment.

5. Comparative Evaluation

Evaluation Criterion	Weak Prompt Response	Optimized Prompt Response
Relevance	Limited - may produce general commentary not tied to the specific complaint data.	Clear - directly reflects the categories and patterns present in the data.
Clarity	Moderate - likely an unstructured narrative.	Detailed - organized into distinct analytical sections.
Completeness	Limited - may miss frequency counts or recurring patterns.	Detailed - includes categorization, frequency, sentiment, and hypotheses.
Structure	Limited - no defined analytical sections.	Clear - follows a consistent evidence-to-recommendation structure.

Evaluation Criterion	Weak Prompt Response	Optimized Prompt Response
Business Usefulness	Moderate - leadership would need to ask follow-up questions.	Actionable - ready to inform the quarterly service review.
Actionability	Limited - recommendations, if present, may not be tied to evidence.	Actionable - recommendations are explicitly linked to the largest, most negative-sentiment category.

6. Key Improvement

The optimized prompt improves relevance and context awareness by grounding the analysis strictly in the provided data, improves output consistency through a fixed analytical structure, improves professional quality by separating fact from hypothesis, and improves business usability by tying recommendations directly to evidence.

Scenario E: Creating a Project Status Update

1. Weak Prompt

WEAK PROMPT

Give me a project update.

2. Example Response to Weak Prompt

The project is going okay. Some things are done and some things are still in progress. There might be a delay with the billing vendor but it should be fine.

3. Optimized Prompt

OPTIMIZED PROMPT (SUMMARY)

Role: You are the Project Manager preparing a weekly status update for cross-departmental stakeholders.

Context: The project is a company-wide CRM migration currently in its execution phase. Stakeholders receive this update every Friday and use it to decide w [...full prompt in Part 2 / Part 3]

4. Example Response to Optimized Prompt

Project Name and Reporting Period: CRM Migration - Week of Sept 22-26

Overall Status: At Risk

Completed This Period: Data mapping for the sales module; user acceptance testing for the finance module.

Ongoing Activities: Integration testing with the billing system.

Upcoming Milestones: Go-live readiness review scheduled for October 3.

Risks and Blockers: The billing system vendor has not confirmed API documentation, which may delay integration testing. Owner: IT Integration Lead.

Action Items: IT Integration Lead to follow up with the vendor on API documentation before the October 3 readiness review.

5. Comparative Evaluation

Evaluation Criterion	Weak Prompt Response	Optimized Prompt Response
Relevance	Limited - may produce a generic update unrelated to the actual project details.	Clear - reflects the specific tasks, milestones, and risks provided.
Clarity	Moderate - status may not be clearly indicated.	Detailed - explicit status indicator and organized sections.
Completeness	Limited - risks or ownership may be omitted.	Detailed - includes risks, blockers, and named ownership.
Structure	Limited - no consistent section structure.	Clear - follows a standard status-update structure.
Business Usefulness	Moderate - stakeholders may need to ask clarifying questions.	Actionable - ready to circulate to stakeholders as-is.

Evaluation Criterion	Weak Prompt Response	Optimized Prompt Response
Actionability	Limited - unclear who owns next steps.	Actionable - action items are tied to a specific responsible stakeholder.

6. Key Improvement

The optimized prompt improves relevance by requiring the update to reflect the specific project data, improves output consistency through a standard weekly structure, improves professional quality by requiring an explicit status indicator, and improves stakeholder usability by assigning ownership to every open item.

Conclusion

Across all five scenarios, the same pattern holds: a weak prompt produces a response that is generic, inconsistently structured, and often missing details the business actually needs, while an optimized prompt built on role definition, explicit context, clear tasks, constraints, defined output format, and stated quality requirements produces a response that is directly usable with minimal editing.

This Prompt Library is designed to be a living, reusable resource. Employees who are new to Generative AI can copy the optimized prompts directly, or adapt the structured JSON entries in Part 3 into internal tools and templates. As business needs evolve, new scenarios can be added to the library using the same seven-part prompt structure and the same before/after evaluation approach demonstrated here, keeping prompt quality - and therefore AI output quality - consistent across the company.
